

**AMENDMENTS TO THE CLAIMS**

1. - 2. (canceled)

3. (Twice Amended) A porous polymeric wick for use in connection with an air freshening device consisting essentially of:

a high density ~~polyethylene~~ ~~polythelene~~ wicking material having a void volume ratio on the order of from between about 30 25 to about 35% 60% and having an average pore size in the range of from about 3 to 30 on the order of less than 250 microns, wherein a combination of said pore sizes and said void volume ratio are selected such that (i) a vaporizable material to be transported by the wick material does not leak from the wick material when the wick material is inverted and (ii) a vaporizable material to be transported by the wick material transfers through said high density ~~polyethylene~~ ~~polythelene~~ wicking material at a rate of about 30 40 to about 70 mg per hour.

4. - 11. (canceled)
